

When to use the Sophos Hardware Sizer

One-pager for Account Managers & Partners

Use this sheet before creating a sizing link. It clarifies what the tool is (and is not), and how to close the Flag !' Review !' Export loop.

1. Use the sizer when

- You need multi-site Firewall and/or Switch intake without a spreadsheet questionnaire
- You want a defensible Minimum / Recommended / Optimal size before CPQ
- Wireless needs a structured handoff to the wireless desk (not an auto AP BOM)
- An AM/partner and aligned SE will review before quote export

2. Do not use it as

- A live Salesforce sync or list-price calculator
- A replacement for wireless desk design
- A place to show customers model SKUs (thanks page never shows the BOM)
- A source of orderable protection/WAF/support SKUs until Catalog admin maps them

3. How to flag SE

- Create the link with an aligned SE selected
- After submit, Flag for SE (aligned SE notified by default)
- SE works the checklist, marks Reviewed, then export unlocks for the AM

Important: Pilot success: higher complete-submit %, faster flag!'reviewed latency, export-after-review rate. Admins: /dashboard/admin/pilot.
