

Sophos Hardware Sizing Questionnaire

Customer Guide

Your Sophos account manager has sent you a link to a short questionnaire covering your firewall, switch, and/or wireless requirements. This guide explains what to expect.

1. What to expect

The questionnaire takes about 10–15 minutes per site and helps your Sophos account manager recommend the right Sophos hardware for your environment. You can add more than one site if you are sizing multiple locations.

2. Opening the link

When you open the link, you will first be asked to confirm your email address.

- Enter your work email address
- It must be on the same company domain the link was sent to (for example, if the link was sent to `yourname@yourcompany.com`, any `@yourcompany.com` email will work)
- This is a one-time check per browser session, so you will not be asked again if you come back to finish later in the same session

3. Completing the questionnaire

The questionnaire has three steps:

- Sites — add each physical location you want sized
- Configure — for each site, choose which products apply (Firewall, Switches, Wireless / access points) and answer the relevant questions
- Review — a summary of what you have entered before you submit

Required fields are marked with an asterisk (*). If you try to continue with something missing, the page will jump to the first field that needs your attention.

4. Information to have ready

- Firewall: internet circuit speed, typical and peak usage, VPN requirements (site-to-site / SD-WAN and remote access), user counts
- Switches: number of ports needed, PoE device counts
- Wireless: facility type, ceiling height, number of floors, wall materials, and a floor plan (you can upload a file)

5. After you submit

You will see a confirmation page — no further action is needed on your part. Your Sophos Account Manager will review your requirements and follow up with a recommended solution.
